Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, 27-34, 73-76, and 78, drawn to modified proteins, classified in class 530, subclass 350.
- II. Claims 6-26, 53-72 and 77, drawn to DNA, classified in class 536, subclass 23.1.
- III. Claims 35 and 37, drawn to antibodies, classified in class 530, subclass 387.1.
- IV. Claim 36, drawn to a method for detection, classified in class 435, subclass 7.1.
- V. Claims 38-52, drawn to transgenic plants, classified in class 800, subclass 200.

Additionally, Groups I-V are further restricted according to MPEP 803.04 which sets forth that molecules with different sequences are distinct inventions.

Accordingly Applicant is required to elect a single amino acid sequence (i.e., SEQ ID NO: 10, 12, 14, 26, 28, or 30) or a single DNA sequence, (i.e., SEQ ID NO: 9, 11, 13, 25, 27, or 29) along with a statement indicating which claims read upon the elected sequence.

The inventions are distinct, each from the other because of the following reasons:

Invention I, drawn to a protein, and Invention II, drawn to DNA are distinct since they are products with different structure and biological properties. The protein is made of amino

acids whereas the nucleic acid consists of nucleotides. Further methods known in the art used to make the polypeptide require different reagents and parameters from the methods of making the nucleic acid encoding the protein and the method of making the polypeptide does not require the nucleic acid. For instance, the protein can be made by Merrifield chemical synthesis or affinity chromatography.

Invention III, drawn to an antibody is distinct from Inventions I-II and IV-V, since it has an inherent affinity, avidity, and specificity that DNA or a simple protein is not capable of expressing.

Invention IV, drawn to methods of detection is distinct from Inventions I-III and V since it requires additional biological reagents and parameters for detecting the desired antigen.

Invention V, drawn to transgenic plants is distinct from Inventions I-IV, since it is a biological organism capable of independent replication.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1645

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
